

# Troubleshooting Log Collector Installation Issues

## STEP 1: Identify Your Log Collector

Determine which Elastic component you're using for log collection:

- **Filebeat** – Lightweight shipper for forwarding logs.
- **Logstash** – Powerful pipeline for data transformation.
- **Elastic Agent** – Unified agent that supports multiple integrations.

## STEP 2: Check the official Manual

Elastic maintains official installation and configuration guides:

- **Filebeat:**  
<https://www.elastic.co/guide/en/beats/filebeat/current/filebeat-installation.html>
- **Logstash:**  
<https://www.elastic.co/guide/en/logstash/current/installing-logstash.html>
- **Elastic Agent:**  
<https://www.elastic.co/guide/en/fleet/current/elastic-agent-installation.html>

## STEP 3: Verify System Pre-requisites

Ensure the following:

- Supported OS and architecture (Linux/Windows/macOS).
- Network connectivity to Elasticsearch/Fleet.
- Correct file and directory permissions.
- Required system dependencies installed

## STEP 4: Perform a Clean Installation
