

CSPM for Azure Integration

This manual explains how to get started monitoring the security posture of your Azure CSP using the Cloud Security Posture Management (CSPM) feature.

Requirements

- The user who gives the CSPM integration permissions in Azure must be an Azure subscription **admin**.
-

Setup

Option 1: Service principal with client secret (**recommended**)

Before using this method, you must have set up a **Microsoft Entra application** and **service principal that can access resources**. Please go [here](#) before following the steps below.

1. The following information is required.
 1. Directory (**tenant**) ID and **Application (client) ID**
 1. To get these values:
 1. Go to the **Registered apps** section of Microsoft Entra ID.
 2. Click on **New Registration**, name your app and click **Register**.
 3. Copy your new app's **Directory (tenant) ID** and **Application (client) ID**.
 2. **Client Secret**
 1. In Azure portal, select **Certificates & secrets**, then go to the **Client secrets** tab. Click **New client secret**.
 2. Copy the new secret.
 2. Return to Azure. Go to your Azure subscription list and select the subscription or management group you want to monitor with CSPM.
 3. Go to **Access control (IAM)** and select **Add Role Assignment**.
 4. Select the **Reader** function role, assign access to **User, group, or service principal**, and select your new app.

Option 2: Managed identity (optional)

This method involves creating an **Azure VM** (or using an existing one), giving it read access to the resources you want to monitor with CSPM, and **installing the Log Collector on the Azure VM**.

1. Go to the Azure portal to create a new Azure VM.

2. Follow the setup process, and make sure you enable **System assigned managed identity** under the **Management** tab.
3. Go to your Azure subscription list and select the subscription or management group you want to monitor with CSPM.
4. Go to **Access control (IAM)** and select **Add Role Assignment**.
5. Select the **Reader** role, assign access to **Managed Identity**, then select your VM.
