# Daily Update: July 11

Aside from the bug fixes, here's what's updated / improved:
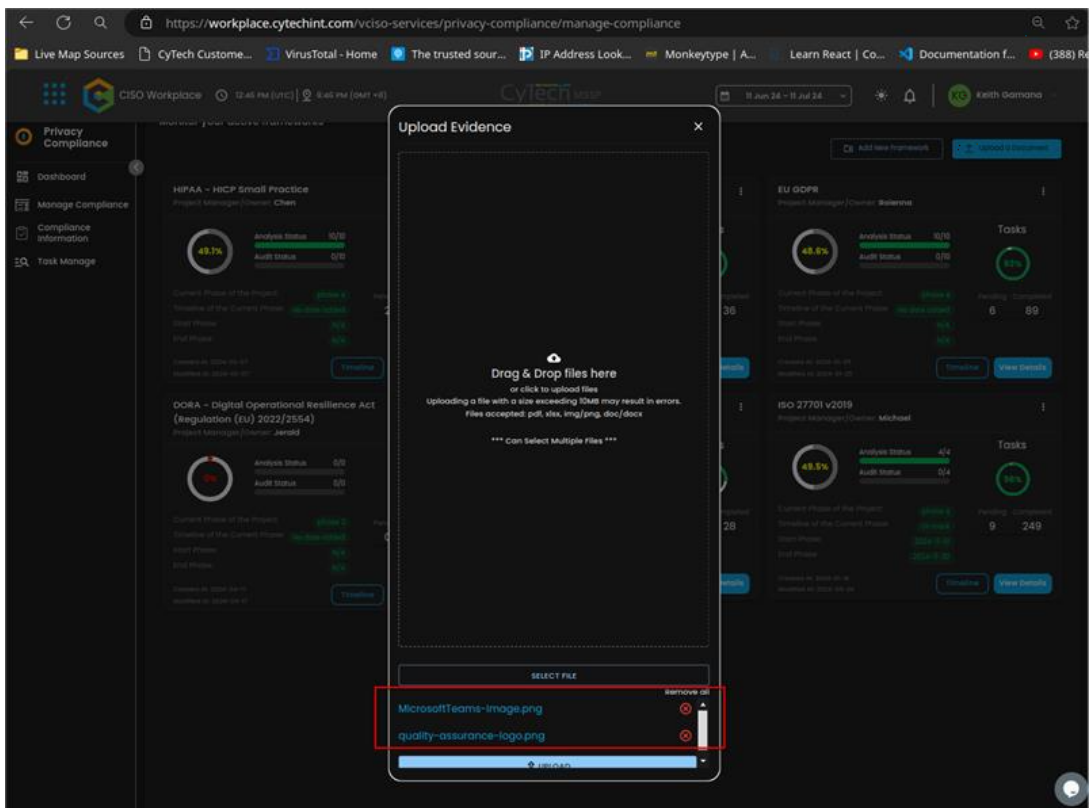

We added another email and landing page template in the Phishing Simulation module.

In our CIM module, to help in the investigation of the alert, an Investigation Guide is available. As of this time, not all Alert Rules have Investigation Guide available.

In our Security and Privacy Compliance, you can now drag and drop the evidence files.

In the RM Module's Dashboard, the components can now be moved and positioned based on your preference.
