

# Daily Update: October 23

Here are the main updates of the CISO Workplace:

## CIM Updates:

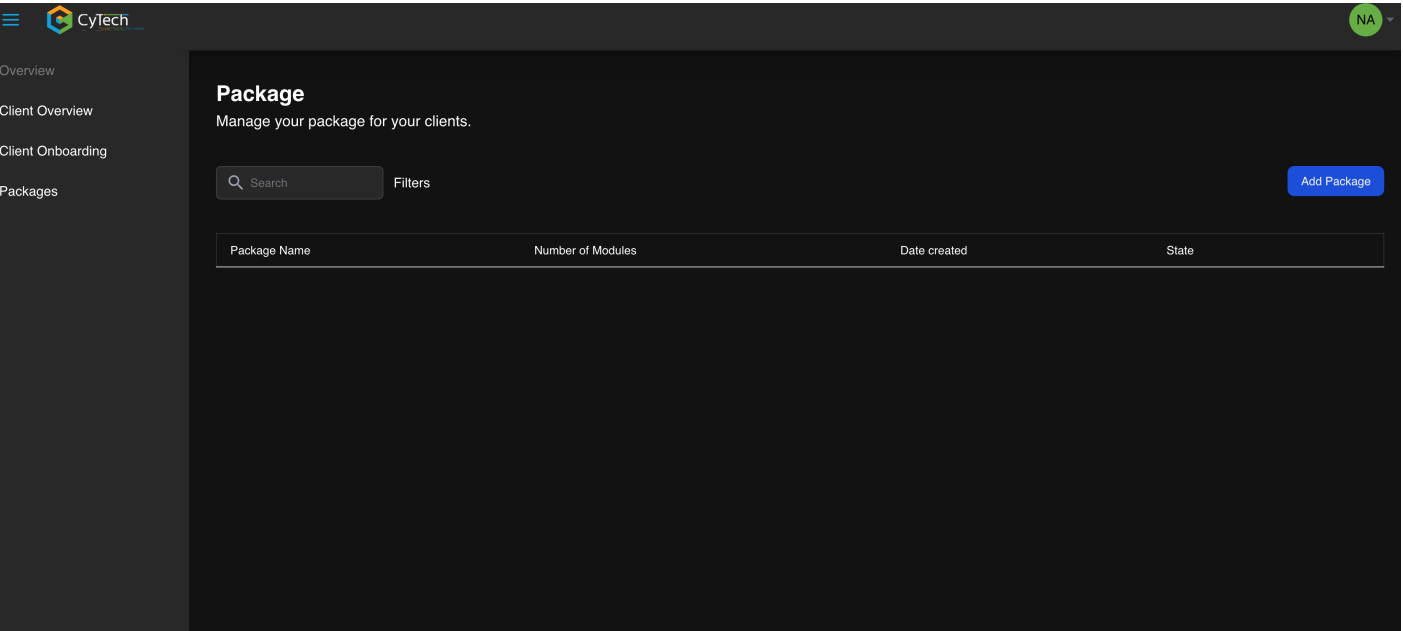

When log source is unhealthy, the reason can now be displayed

The screenshot displays the 'Log Collector List' interface in the CISO Workplace. The left sidebar contains navigation links: Log Collector (selected), Log Source, Alert Rules, Notifications, Kanban, and Access Control. The main content area is titled 'Log Collector List' with the subtitle 'Keeps track of log collectors for easy monitoring and analysis.' A blue button labeled 'Add Log Collector' is in the top right. Below the title, a breadcrumb shows 'LogCollector > List of Integrations'. The interface is divided into two main sections: 'Overview' and 'Integrations'. The 'Overview' section shows details for a specific log collector: Policy ID (0bb2f1c2-7da6-4318-874a-5c134c8fc1bb), Status (Unhealthy), Host Name (31/128), and Platform (windows). A message at the bottom states '3 out of 254 Log Sources added. Add Log Sources to unlock more!'. The 'Integrations' section shows a list of integrations, with 'Microsoft 365 v2.3.2' selected. Under the 'Inputs' tab, a log entry is displayed with a red border, indicating a failure: 'FAILED: failed evaluation: failed eval: ERROR: <input>12:15: Post "https://manage.office.com/api/v1.0/173a53e7-93cb-491a-91c1-da62649661e7/activity/feed/subscriptions/start?contentType=Audit.AzureActiveDirectory&PublisherIdentifier=173a53e7-93cb-491a-91c1-da62649661e7": lookup manage.office.com: no such host | ) ? | .....^'.

## Admin Updates

Package Creation Support
